Terminal T1 L

The Cost-Effective Terminal for the Linotype Systems 4 and 6

The Terminal T1 L is a new, compact and extremely flexible work station for the System 4 and 6. In contrast to the T1 S, the floppy-disc storage was deliberately omitted in this low-cost version. Naturally not omitted were other highly convenient operating features such as: split screen, soft scrolling, paging, diverse display modes, various screen fonts, and many more. The 192 KB microprocessor controls all local functions from text collection and correction through to data communication with the central computer. Up to 24 terminals in the System 4 and up to 40 terminals in the System 6 are supported by every processing computer. The models T1 L and T1 S are mutually compatible and can be installed in any desired combination.

Unrestricted application features

The T1 L is a universal text collection, correction and editing terminal. It can be adapted to editorial work as well as ad collection, to the requirements of booktype and jobbing composition, or to production demands. This is achieved by user-definable mask fields (so-called screen forms). Every T1 L Terminal can be dressed to its particular task via a T1 S floppy-disc drive or by loading the appropriate program into the central unit.

Main features

- Compact cabinet
- Large, glare-free 15″ screen
- Large, easy-to-read screen characters
- Split-screen function
- Various representation features (emphasis) for fast and clear text composition (e.g. negative or intensified)
- Display in different screen fonts
- Vertical soft scrolling
- Character and background intensity individually adjustable
- Adjustable visual display cabinet
- Detached low-profile keyboard with large hand rest
- Comprehensive keyboard containing 124 keys; 104-position-keyboard optional
- Every key freely programmable for multi-function application
- Acoustic signal (with every keystroke), adjustable pitch
- Screen memory capacity of 16,000 characters; 2 visual display memories, each with 16,000 characters, in split-screen mode
- Integrated character and line counter

Technical Data of the T1 L Terminal

Input	Endless, via typewriter keyboard supplement by additional function and command keys; optionally with 124 or 104 keys.
Visual display screen	38 cm (15″) diagonal, 24 lines, each with 80 characters, of which 1, 3 or 5 lines can be specified as fixed mask (headings); scroll function forwards and backwards within the working memory Vertical soft scrolling
Text representation	Endless (with word wraparound for line endings) or line endings justified; subdivision either into two areas (full screen – fixed mask and text area) or three areas (split screen – fixed mask and two text areas); multiple features for emphasis of text passage, e.g. by intensified display or freely dressable overlay characters; three screen fonts; loadable character generator
Computer	One 192 KB microprocessor with RAM program storage
Correction	All known functions
Addressable units	16,000 characters of type matter in full-screen mode; two text memories each with 16,000 characters in split-screen mode
File access methods	Directly via job number (or contract/class number); index-sequentially via keyword (e.g. ressort, story name, or title)
File correction features	Modify, Delete, Insert, or Supplement with automatic file management by the system
Operating system	Foreground processing, real-time, multi-tasking
Foreground operation	In dialogue (interactive) via keyboard

Design subject to modification without notice. Errors accepted.
Composed in Linotype Helvetica light, Helvetica bold and Caslon italic.
Printed in the Federal Republic of Germany 048230 MDO.
